NIÑO BOX / ROLL

NIÑO BOX / ROLL

Shade Min-Max: Width: 16" - 110" | Height: 22" - 110"

[Detailed spec sheet](#)

Features and Benefits

- Niño Shades are designed to blend seamlessly into the window, making them nearly invisible when in place.
- Box is available in 5 colors: White, Warm White, Clear Anodized, Char Brown and Black.
Roll is available in White or Black.
- Industry standard light gaps, as small as 3/4", depending on size and configuration.
- Group control through included RF remote, third-party integration, or through Troy when connected to a Helen.
- Sunscreen, Light Filtering and Black-out fabrics available.
- The new Dual protocol motor from Shade Innovations enables seamless programming and control via Zigbee and RF remote controls.
- Adjustable limits using the included remote control, or through TRO.Y when connected to a Helen.
- Lithium battery powered shades up to 3 years between charges*, featuring soft start and stop technology for smooth and quiet operation.

**Battery life dependent on motor type and battery size.*

NIÑO DUO

NIÑO DUO

Shade Min-Max: Width: 17" - 78" | Height: 16" - 98"

[Detailed spec sheet](#)

Features and Benefits

- Niño Duo motorized shades come equipped with a USB-C rechargeable lithium battery.
- Hardware is available in five stylish color options: White, Warm White, Clear Anodized, Char Brown and Black.
- Allows blackout or partial light filtering to control natural light and temperature, helping reduce energy use.
- Adjustable limits using the included remote control.
- Available in various fabric combinations, such as sheer with blackout or light-filtering with opaque, to support different lighting and privacy needs.
- Lithium battery powered shades up to 3 years between charges*, featuring soft start and stop technology for smooth and quiet operation.

**Battery life dependent on motor type and battery size.*

Sun Screen, Light Filtering & Blackout

Duo Shades combine a sheer layer and a blackout layer in one elegant setup, letting you shift effortlessly from filtered light to total room darkening. Perfect for spaces that need both beauty and functionality.

NIÑO ROMAN

NIÑO ROMAN

Shade Min-Max: Width: 16" - 98" | Height: 22" - 110"

[Detailed spec sheet](#)

Features and Benefits

- Niño Roman motorized shades come equipped with a USB-C rechargeable lithium battery.
- Blackout or partial Light Filtering options help to control natural light and temperature, helping reduce energy use.
- Valance options: Standard front, Flush to wall.
- Tightly woven for durability and structure, with subtle tonal variations that add visual texture.
- The shades are designed to be durable and low - maintenance. The fabric is resistant to stains and wrinkles, and the motor components are built to last, providing you with years of reliable service.
- Group control functionality via RF remote or smart home platforms makes it easy to operate multiple shades simultaneously.
- Adjustable limits using the included remote control, or through TRO.Y when connected to a Helen.
- Lithium battery powered shades up to 3 years between charges*, featuring soft start and stop technology for smooth and quiet operation.

**Battery life dependent on motor type and battery size.*

Tailor Your View

Made from premium fabrics, they add texture and personality to your space while improving insulation and UV protection. Perfect for enhancing both elegance and energy efficiency in any room.

- Trapezoidal Cellular

SI Ecosystem (Wired/ Wireless Zigbee 3.0)

Powered by SI Motor & Control Technology, you deliver seamless RF/PoE and RF/Zigbee shade integration effortless, precise, and beautifully intelligent.

Niño Low Voltage Power Panel

The Niño Low Voltage Power Panel provides power for up to 18 separate 12V DC motors, and removes the need for multiple individual power adaptors for each DC motor in an installation, combining each power source into a single location.

Niño 12v Low Voltage Power Supply

Individual 12v Power Supply for Niño Low Voltage Zigbee Motors.

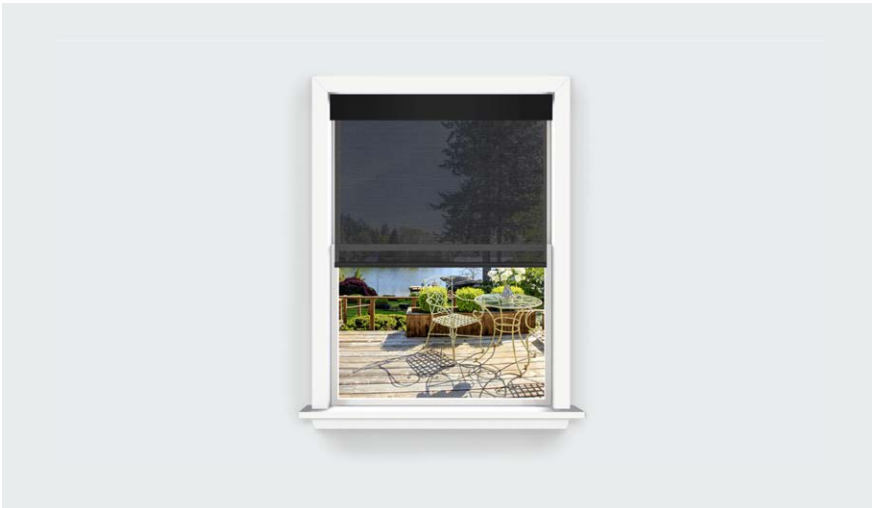

1K PoE Switch

Engineered specifically for the Motorized Shade Industry, the 1K PoE Switch combines high-performance power delivery, streamlined efficiency, and outstanding value—all in one compact, game-changing device. Unlike traditional PoE switches that depend on bulky external power supplies, the 1K PoE features a built-in, silent, and cool-running power system. This integrated design not only reduces clutter but also ensures reliable, whisper-quiet operation tailored to professional shade automation environments.

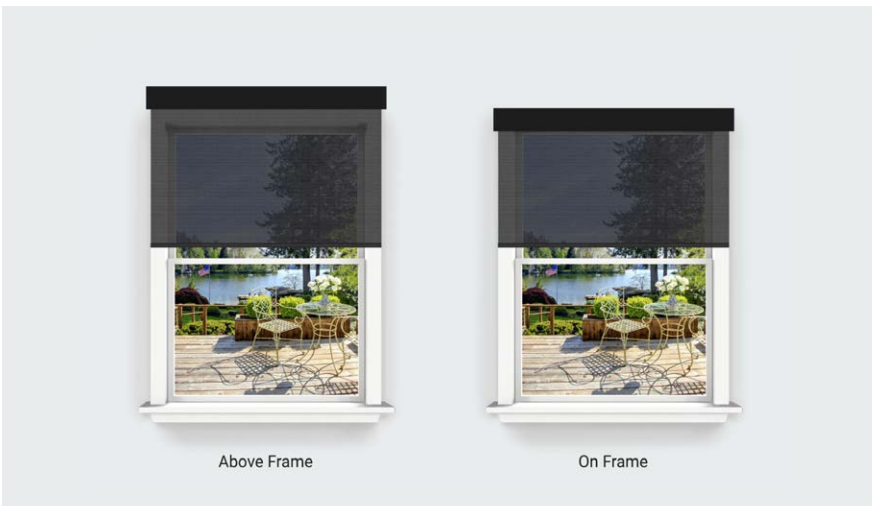

Mounting Options

Depending on window dimensions, shades can be mounted inside the window frame, outside the window frame, or in a pocket.

Inside Mount

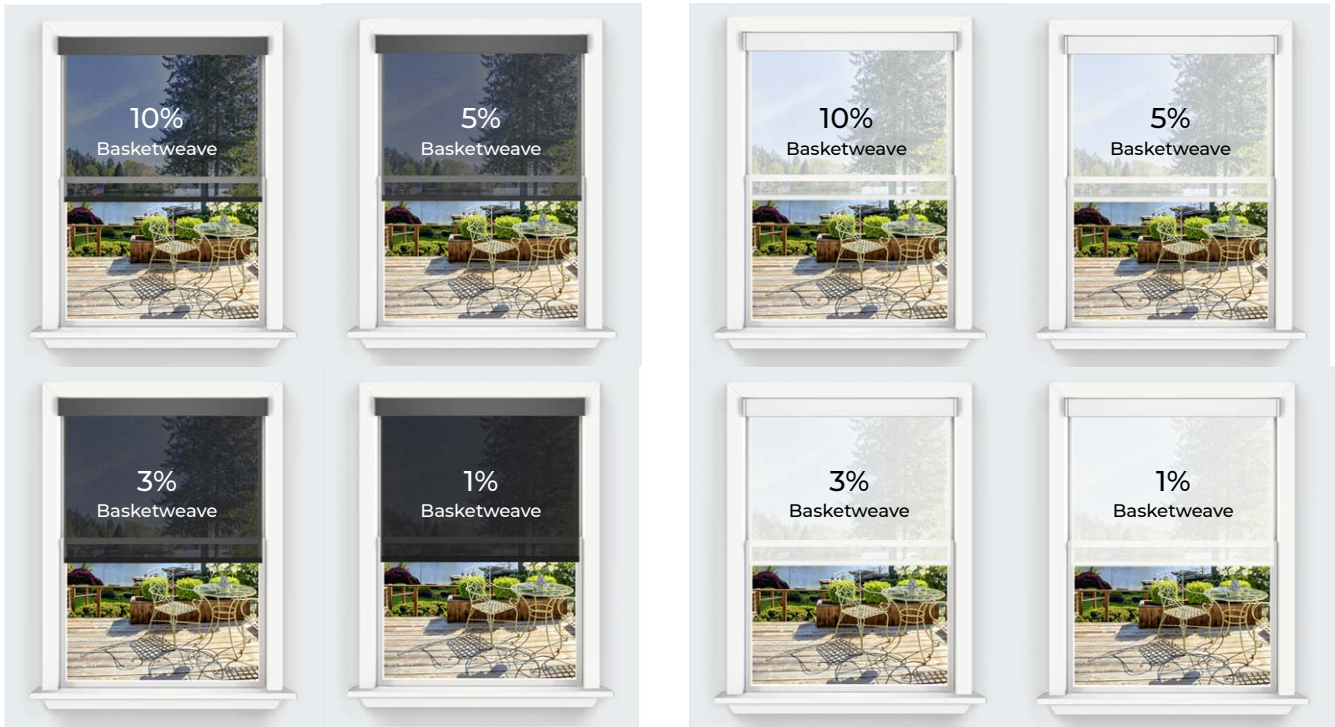

The most effective and common method of mounting roller shades is within the window opening. This places the fabric as close to the glass as possible, and minimizes light gaps. The SI Factory will automatically deduct 1/8" in width on an inside mount order.

Outside Mount

Select "Outside Mount" when spanning multiple windows, where job conditions require, such as radius or other decorative trim within the opening, or where it will provide a more pleasing overall aesthetic. Zero deductions are taken on outside mount. Light gaps could be pronounced.

Shade Fabrics

Sunscreen

Transparent screen fabrics filter incoming light, reducing heat gain, glare and harmful UV rays. Endless combinations of color and openness factors are available to fine tune your needs at each window. They do not offer privacy, however, so please take that into account when selecting shade material.

Light Filtering

Translucent fabrics reduce heat and UV rays, but allow natural diffused light in, providing a soft glow when they are closed. Light Filtering fabrics offer many more decorative choices than woven screens, while also giving many of the same benefits. They differ from Screens in that they don't offer a view - through, but do provide limited privacy. Candle the fabrics at your windows both during the day and especially after dark to confirm privacy is adequate.

Blackout

Blackout fabrics stop light from penetrating through the material, creating privacy when needed. They offer a neutral white to the outside, regardless of the interior color selected. Many color choices and textures are available, making interior coordination easy. Some perimeter light bleed should be expected during the day. Paired with Side and Sill Channels for best blackout experience.
