

Fontus - Motor Control

Installation Instructions

1 Motor Control Kit - #201477

Fontus Keypad Kit - #201498

INSTALLERS: PLEASE LEAVE THIS MANUAL WITH THE OWNER.

Doc # 400146

FONTUS - THINGS TO CONSIDER BEFORE INSTALLING

What is FONTUS?

FONTUS is a unique 485 device that can be used to send power and data over two conductor wire, or it can be used as a standalone 485 motor controller.

What can FONTUS do?

FONTUS accepts commands from a third-party control system, projector, or keypad and converts them into 485 commands. FONTUS can control any 485 motorized products available from Screen Innovations. FONTUS can accept the following common control inputs:

- 12v trigger (latched 7-12v)
- Contact Closure (relay, dry contact)
- IR (infrared)
- Keypad (with FONTUS keypad)

What products does FONTUS work with?

FONTUS can control virtually any 485 motorized product available from Screen Innovations. This includes:

- 3/5 Motorized
- Solo 2/Solo Pro 2
- Nano
- Zen
- Veil

How is FONTUS Powered?

FONTUS is an actively powered device and requires 7-28v DC power regardless of the application. Power can be supplied by Janus, the 24v “wall wart” power supply included in the FONTUS control kits, or with a third-party power supply. There is an important distinction for line voltage and low voltage applications of FONTUS:

- Line voltage: the 24v power supply powers FONTUS only, the screen motor is powered separately by the line voltage connection.
- Low voltage: 24v power supply powers FONTUS and the screen motor.

Fontus Pinouts

485 screen output
Power supply output
(24v - 28v DC)

GPIO INPUTS
(12v Trigger, Dry Contact, IR)
Power supply input
(24v - 28v DC)

FONTUS - THINGS TO CONSIDER BEFORE INSTALLING

Inputs / Outputs BCP - Inverted Header Side 485 - Header Side	Features <ul style="list-style-type: none">• No Programming needed• Plug-n-Play• Full 2 way 485 Control (with additional codec)• 12v trigger for use with projectors• Dry Contacts for use with any control systems• IR input for use with included IR Receiver & Remote (1 Motor Control Kit)• Low Voltage Power Input - Fontus receives power via any 7v - 28v DC power• Connectors are compatible with all 485 screens
Power Input 7v - 28v DC	
Dimensions 0.86" L x 2.42" W (22 mm x 62 mm)	
Max. Wiring Distance 18 / 2 up to 150' 16 / 2 up to 60'	

FONTUS - WIRING OVERVIEW

FONTUS - THINGS TO CONSIDER BEFORE INSTALLING

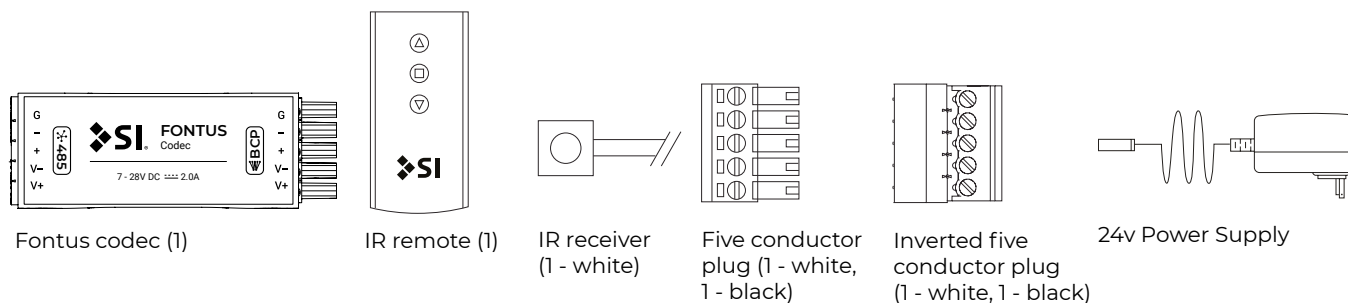

Mounting Fontus near your screen.

1. Fontus needs to be connected within 1 meter of the screen.
2. Optionally the Din Rail Kit can be used for mounting.

The diagram shows a DIN rail on the left with several mounting slots. An arrow points to the right, where a DIN rail kit is shown. The kit consists of a long horizontal bar with four oval-shaped cutouts in the center, designed to hold the Fontus unit.

FONTUS - PACKAGE OPTIONS & IN THE BOX

1 Motor Control Kit - #201477 (In the box)

All codecs come with both white and black color options to match your screen

Fontus Keypad Kit - #201498 (In the box)

All codecs come with both white and black color options to match your screen

Changing your Fontus from White to Black

1. Remove the 485 Connector
2. Identify and locate SI Rip cord, hidden under the Terminal Block
3. Identify and locate small cut in the Heat Shrink near the bottom right corner under the terminal block
4. Position SI Rip cord in the small cut, while holding the codec firmly slowly pull the Rip cord toward the BCP side to start tearing the white heat shrink
5. You should now be able to peel the remaining white heat shrink exposing the black underneath.

FONTUS - POWER OPTIONS

⚠ Never connect Line-Voltage to Fontus!

With Janus

With Included Power Supply

With Third-Party Power Supply

FONTUS - POWER OPTIONS

⚠ Always disconnect Fontus when programming a motor!

Line Voltage 12v Trigger

Line Voltage Contact Closure (Relay/Dry contact)

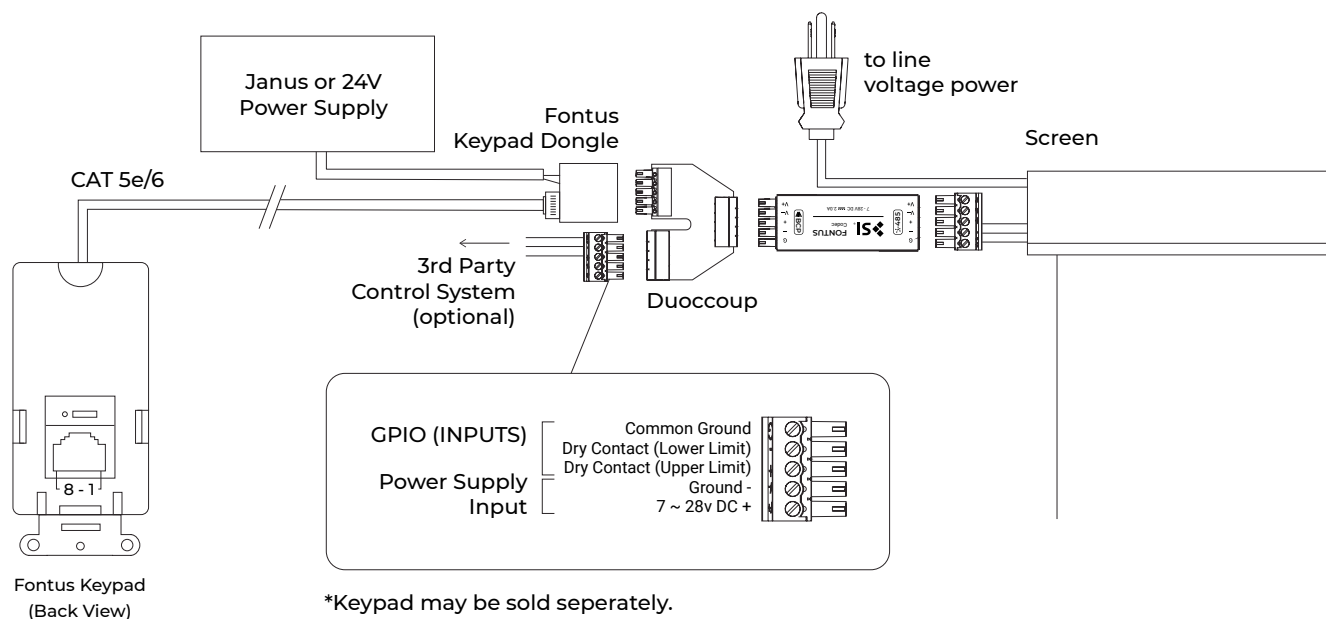

FONTUS - POWER OPTIONS

⚠ Always disconnect Fontus when programming a motor!

Line Voltage IR

Line Voltage Keypad

Note: This keypad looks similar to the 485 and RTS versions SI offers, however it has a different wiring pinout and cannot be programmed. It is only a Dry Contact keypad.

Note: When using a Fontus keypad, IR and 12v Trigger control is not available!

FONTUS - POWER OPTIONS

⚠ Always disconnect Fontus when programming a motor!

Low Voltage 12v Trigger

Low Voltage Contact Closure (Relay/Dry contact)

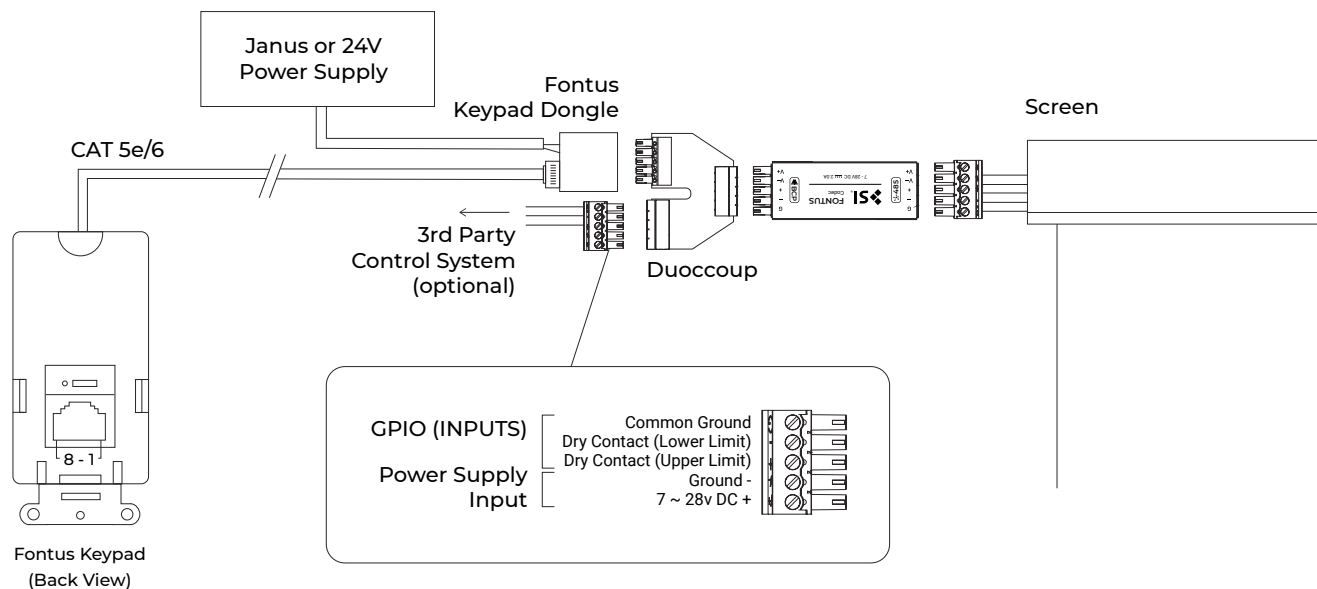

FONTUS - POWER OPTIONS

⚠ Always disconnect Fontus when programming a motor!

Low Voltage IR

Low Voltage Keypad

Note: This keypad looks similar to the 485 and RTS versions SI offers, however it has a different wiring pinout and cannot be programmed. It is only a Dry Contact keypad.

Note: When using a Fontus keypad, IR and 12v Trigger control is not available!

Hexcodes

Third party IR universal control systems may be used to control the screen and commands may be learned from the SI IR Remote or using these hex codes:

Note:
 Fontus can only respond to these IR codes. No serial connection can be made.
